

LIVESCRYPT

Simplified real-time automatic transcription

Epiphan LiveScript™ AI-powered real-time transcription

Most automatic transcription services on the market today are for post-production. LiveScript works in real time and features built-in professional audio inputs, making it easier to achieve accurate AI-based transcription.

Ensure high performance from end to end

Pressure to keep pace with speakers increases the rate of human transcription errors – especially after fatigue sets in. LiveScripT never wavers and never loses steam, ensuring high transcription accuracy from start to finish. And with built-in professional audio inputs, LiveScripT makes it easy to connect to crystal-clear audio for accurate AI transcription.

Save on live transcription fees

Human transcriptionists skilled enough for live events command premium prices, and often fees continue to accrue even when your event pauses for lunch. With a low initial hardware cost and minimal per-hour transcription fees, LiveScripT is a wise investment for any organization with a need for live subtitling.

Tailor to your event

LiveScripT offers several customization options to suit your unique requirements, including multiple languages, light and dark settings to make transcriptions easier to read, automatic punctuation, and profanity filters. You can also apply a North American Industry Classification System (NAICS) code to increase transcription accuracy for specialized vocabulary.

Simplified real-time automatic transcription

From conference presentations and company town hall meetings to university lectures and church sermons, LiveScript can transcribe it – automatically, accurately, and affordably.
